

# NATIONAL GEOGRAPHIC INFORMATION DIRECTORY

**REVISED EDITION - MARCH, 2006**

FLIS Support Centre  
1<sup>st</sup> Floor, Red Cross Building  
22 Gorrie Street,

## **INTRODUCTION**

Every organization requires, creates or distributes information in some form. Access to up-to-date and comprehensive data is therefore essential to good decision making.

In the past, spatial data was commonly displayed as tables of numbers or paper maps. The advent of Geographic Information Systems (GIS) and other computer-aided technologies has benefited users by enabling them to store, manipulate and analyse spatial data in new and more efficient ways. This has led to a substantial increase in the demand for digital data.

As part of its responsibility to co-ordinate and facilitate the implementation of geographic information in Fiji, the Fiji Land Information System Support Centre released an Information Directory in October 1999, which listed brief information on the datasets held by public and private agencies and is available for use in the country.

Following the success of that first edition, FLIS Support Centre is pleased to present a revised edition of the National Geographic Information Directory.

## Land Use Capability Map

---

Land Use Capability is a systematic arrangement of different kinds of land. It evaluates properties of the land in order to determine its capacity for sustained production. Capability is best read in the sense of suitability for productive use” after considering the biophysical, chemical and climatologically limitations the land has.

Land Capability are categorized into three levels;

Major Level – I,II,III,IV,V,VI,VII,VIII

Subclass – e,w,s,c (e- erodability factor, w – wetness factor, s – soil factor, c – Climate factor.

Capability Unit – 1,2,3.

## Soil Map

---

The Soil Taxonomic Unit Description (STUDs) have been prepared as a supplement to the national soil map. They provide the basic reference for the 227 soil series identified in the national survey. The availability of this data to planners and managers will assist in improving environmental assessment and management, economic planning and sustainable land use from increased primary sector development.

### 3 Fiji Pine Limited

---

#### Fiji Pine Maps

---

Fiji Pine Maps are Plantation maps with a Topographical base consistent with the Fiji Mapping Series. Fiji Pine Estate is subdivided into Six Forests due to its geographical locations and these Forests are further subdivided into Planning Units for better management purposes. The planning units by Forests are subdivided into stands. These stands become our smallest management unit. Each stand records our plantation area of the same plantation age. Various programmes and treatment types are carried out before the stand is declared fully stocked. Five to seven years later stock mapping exercise is carried out by conducting aerial survey to do re-mapping. This re-mapped area becomes the basis for our valuation and for our management to make strategic decisions.

## Forest Functions

---

The Forest Function map is mapped from the National Forest Inventory, which was conducted in 1991. Other than other topographic maps these maps were derived from the LandSat satellite images and field verification to determine the forest covers for the whole of the Fiji Islands. The forest function is derived from various components of soil erodability, slope classes and various declared areas (this are hotspots or areas of environmental values e.g. endangered or endemic flora and fauna)

## Forest Management Information System

---

The Forest Management Information System contains data which includes forest cover divided into dense, medium and scattered forests, hardwood, pine plantation and mangrove for all of Fiji. Detail information is also stored about woody, biomass, species, regeneration potential, minor forest product such as medicine plants. It also hold spatial info such as digital terrain model, soilmap, slope, seasonal and mean annual rainfall, declared reserve areas, bio-diversity, forest functions, cover with logged-out areas, etc.

## Computerised Cadastral Mapping System

---

---

The CCMS is the GIS database that holds data about land parcels in Fiji with respect to their geographic location, shapes, area and legal description. Other details also shown are admin unit, map label, native reserve, native land owning unit, parcel, record sheet, reserve, road, shoreline, source, state land, survey mark catography, tiri land, title, village, watercourse.

## 15 Tourism, Ministry of

### Business Register Listing [BR Listing]

Fiji Standard Industrial Classification [FSIC] is the classification system used to classify all companies that are registered/listed in Fiji and are sorted out according to the type of activity they are engaged in. This data generally include the business name and address and is provided to the Ministry of Tourism by Bureau of Statistics for the purpose of Tourism Satellite Account Project and in-house data collection purposes. Data has been further categorized into provincial areas.

## Tourism Earnings

---

The Tourism Earning Inventory includes total earning figures by country of residence which is also available by Quarter.

Through our International Visitor Survey, figures for tourism earnings/expenditure are further tabled according to:

- Expenditure by category [Accommodation, Activities, Cruises, Tours, etc]
- Tourism areas [1992 – 2002]
- Provincial basis [2003 & 2004]

Tourism Earning Forecast: include arrival projections prepared by FVB till 2007
